

Jaypuri Goswami

Porbandar, Gujarat, India • +919924768159 • Goswami_jay@outlook.com • <https://linktr.ee/cyber.jay>

Passionate cybersecurity professional with a strong foundation in penetration testing, ethical hacking, and software development. Holds certifications like PNPT and eWPTv2, with hands-on experience in network and web application security. Skilled in Active Directory penetration testing, reverse engineering, and malware analysis. Seeking an opportunity as a penetration tester to apply technical expertise and enhance organizational security.

Education

MAY 2023
Bachelor of Computer Application (BCA) | BKNUM Junagadh, Gujarat | CGPA • 8.81

Experience

Cyber Security Instructor: MrWebSecure: from Jan 2025 to April 2025

Educates and trains individuals and organizations on various aspects of cybersecurity, including network security, penetration testing, MiTRE Attack chain, phishing email investigation, OWASP Top 10, Threat hunting, incident response, and compliance, ensuring the security of sensitive data and protecting against cyber threats.

IT Lecturer: VJ Modha College: from May 2025 to present

Deliver lectures and practical sessions on Cybersecurity, Cryptography, Cloud Computing, and Web Development. Teach students fundamental and advanced concepts in information security, cryptographic techniques, network security, and secure computing practices. Provide hands-on learning in cloud technologies, deployment concepts, and cloud security fundamentals.

Certifications

- Practical Network Penetration Tester (PNPT) Dec-2023
- ELearnSecurity Web Application Penetration Tester (EWPTv2) May-2024

Skills & Tools

Network Penetration Testing	Nmap, Metasploit, Wireshark, Nessus
Active Directory Penetration testing	Responder, Bloodhound, Mimikatz
Web Application Penetration testing	Burp Suite, SQLMap
Reverse Engineering	Ghidra
SOC Analysis	Splunk, EDR, IDS/IPS(Snort)
Malware Analysis	Sandboxing, Static Analysis, Dynamic Analysis

Programming Skills

Javascript • Python • Django • Node with Express • Mysql • MongoDB • X86 Assembly

Projects

HACK-TOOLS

- Submitted as last year college project.
- Web application developed in Python framework Django, that let logged in user check if host is up or down, port-scan and firewall detection.
- This web application behind the scenes using Nmap, Wafw00f and ICMP echo request to ping.

ACTIVE DIRECTORY HOME LAB

- Active Directory home lab that consists one Domain Controller, two user machines and one attacker machine.
- This lab is used to demonstrate attacks like LLMNR Poisoning, SMR Relay, Kerberoasting, Token Impersonation, etc.
